Nuxt Training

IMT

Introduction

To practice what was described in the course, you will implement an application that allows to manage TV shows.

To help you get data, you can use the nodejs server provided by your teacher. It contains a web api exposing tv shows data. Feel free to modify it however you like (adding data, updating end points, etc ...)

Technical constraints

- Use NuxtJS

- Host your code on github

Functionalities

- Display a list TV shows

- Access to details on each of them

- Search system to retrieve a specific TV show

- Favorites system

- Add new TV show

- Update TV show

- Delete TV show

This list of functionalities is not mandatory. The intent is to give you ideas for your project. Feel free not to implement some functionalities listed here or even implement some that are not listed.

Logistic

Team

Team of 2

Duration

One afternoon

Expected

- Source code on Github

- Presentation

Presentation

- 20 min

- Description of the functionalities (you can make a demo)

- Presentation of the technical stack used

- What did you learn ?

- Your feelings on Vue and Nuxt ?

Again the infos listed are only here to help you prepare the presentation. You are not forced to follow the track presented here, but your presentation have last around 20 min.

- 20 min

- Description of the functionalities (you can make a demo)

- Presentation of the technical stack used

- What did you learn ?

- Your feelings on Vue and Nuxt ?
